

# enovOcean

## A new wind on Renewable Marine Energy

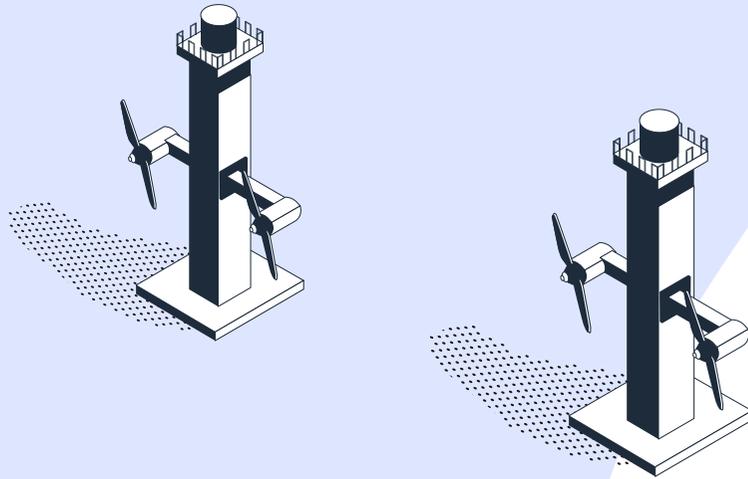

powered by

 **NOVELTIS**

# WHAT YOU WANT

to identify easily the most promising tidal currents

- 1 To get an easy-to-use and reliable information on tidal currents
- 2 To map the interesting zones
- 3 To characterize the most interesting spots for tidal turbines

# Be efficient!

- To plan your trials of marine tidal energy turbines
- To be able to harness the most interesting tidal currents in the world
- To determine whether the bathymetry allows your kind of turbine

# WHAT WE DELIVER

Marine energy products for professionals

**A user-friendly web platform** delivering professional information on tidal streams

**Maximum velocity** recorded over one year in the world

**Occurrence of velocities** between 1.5 and 3 m/s to know how often you will be productive

**Power density** in Kw/m<sup>2</sup> to assess the energy you can generate

**Bathymetry** to know whether your turbine can be operated
